

Hello class! We hope you had a nice Thanksgiving and Halloween. Fall is in the air and winter is quickly approaching! The bright colors of spring and summer have now turned into darker yellows, oranges, and browns. Speaking of the color brown, are you noticing more brown in your worm bin? Over the year, you should be seeing less bedding and more castings (worm poop).

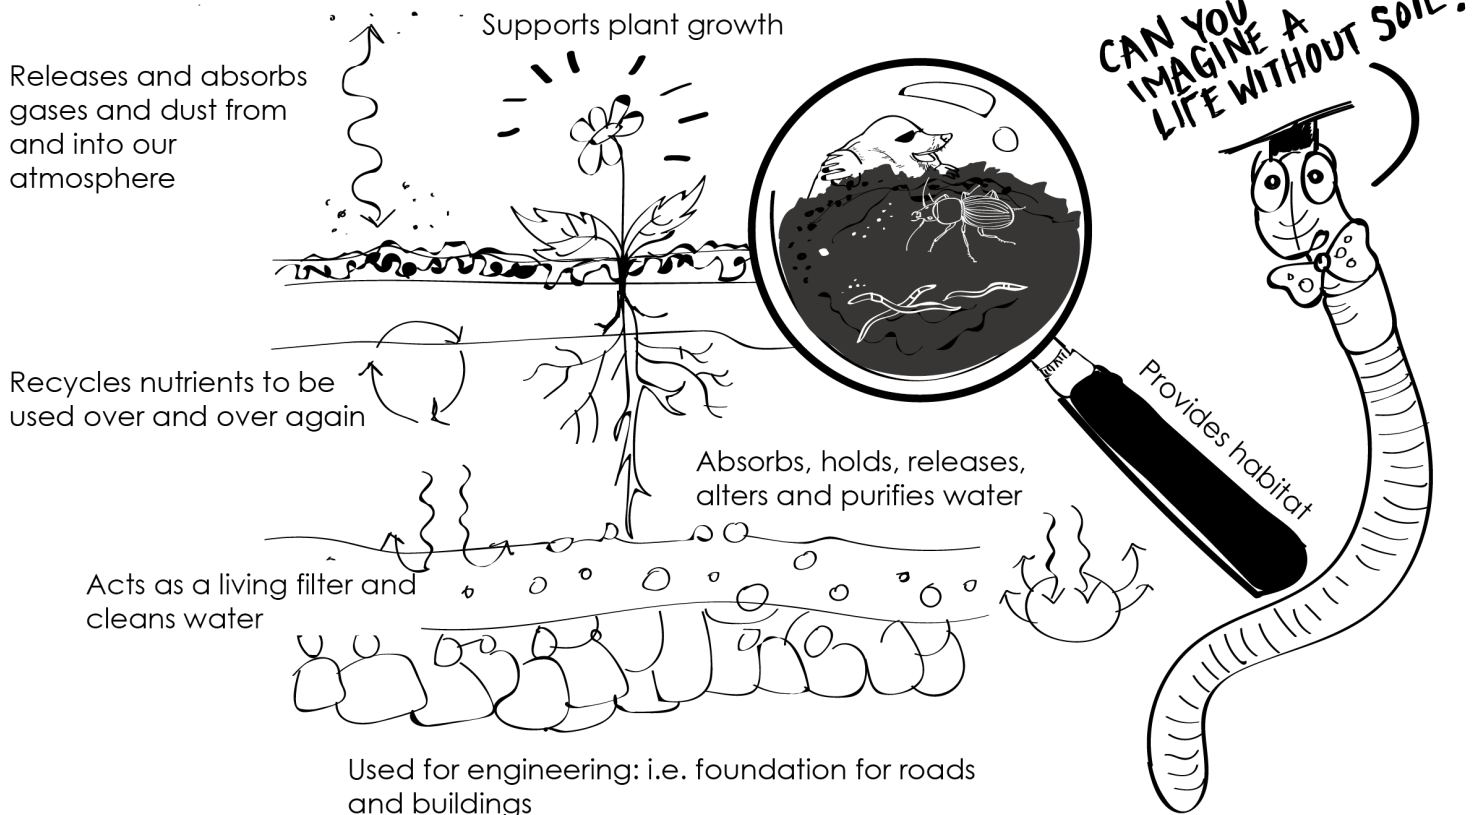

“There are over 1 billion organisms in a pinch of soil, and many of them perform functions essential to all life on the planet.”

- Tales from the Underground: A Natural History of Subterranean Life

WHAT ARE SOILS?

A complex mix of minerals, water, air, and organic matter (including organisms). Soil is the skin of the earth and capable of supporting plant life that brings life to us and other living things! (Soil Science Society of America)

WHY IS SOIL IMPORTANT?
